

ATLANTIS ORIGIN

Real application of blockchain products

ATLANTIS ORIGIN

——Real application of blockchain products

1 Project brief

With the development of blockchain, virtual currency is in a period of vigorous development, but it is more a conceptual product. NFT, as a new blockchain product this year, has won the popularity of players and art collectors in the circle since its listing.

1) WHAT IS ATLANTIS ORIGIN

【ATLANTIS ORIGIN】 is a completely decentralized platform with NFT concept as background, blockchain as technical support, NFT product concept constructed through reverse thinking, game mining, NFT auction, NFT casting, uaswap exchange and other blockchain ecology.

【ATLANTIS ORIGIN】 was launched by Z & L anonymous team in January 2021 to carry out interesting reform on the existing decentralization, so as to improve the user's sense of participation and experience. We're building a forgotten continent in the meta universe——FROGETTEN CONTIENENT. Users can enter the world to search for treasure games. If you get these treasures, you will get a lot of revenue, including some tokens, NFT, and props needed by the game. Of course, users can also participate in bidding for NPC characters in the platform to get stable and high revenue.

Different from other mining games

For traditional mining, 【ATLANTIS ORIGIN】 provides more fun, not only has more stable income, but also has some additional income, which depends on the

value of random items obtained by users in the process of the game.

2)TARGET

Our goal is to digitize the physical art and materialize the digital art.

2 Functional Composition

1) TOKEN

ATLANTIS ORIGIN (ATS)

We will issue ATS tokens for the governance and use of the platform, and give value to the tokens with physical works of art. This token will be used in games, sports and other fields in the future.

Token Name: ATLANTIS ORIGIN

Token abbreviation: ATS

TOTAL SUPPLY: 2000000000

SEO mechanism: None

Destruction mechanism: None

Dividend mechanism: YSE

Token allocation:

Team ownership: 25%

Product provider: 20% (initial product release 5%, remaining continuous payment)

Crowdfunding and presale: 10%

Flow cell: 20% of total amount (added in 4 times)

Secondary market: 20% of total

Community operation incentive: 5%

2)FROGETTEN CONTINENT

a. ENTER SPACE

Users must get tickets to enter the space, which can be exchanged at the ticket exchange at the entrance of the space. After entering the space, you will officially start a 7-day treasure hunt. In this process, like the real world, you will need to sleep, eat and work. Your job is to find and obtain these treasures. Only when you have completed the work, can you obtain benefits. If you are in trouble in virtual space, you can ask other players or NPC for help. Of course, you need to pay some token. In order to obtain the treasure efficiently, you may need to obtain some props, such as map, shovel, flashlight, dagger, etc; In order to speed up the journey, transportation may also be needed. These props can be found in the game, of course, you can also use tokens to buy from other players or stores.

b. Division of roles

There are two kinds of characters in virtual space: Treasure Hunter and NPC.

(a) NPC: before the game starts, we will conduct public auction for NPC characters. After entering the game, the users who obtain NPC characters will be paid according to the services provided for the players. These characters include consultants, shop owners, hotel or hotel owners, banks, auction houses, etc.

(b) Treasure Hunter: an ordinary player, you can entrust an auction house to auction the treasure or find some unnecessary props to get tokens. At the same

time, you can also sell it directly to the store. The owner of the store has the right to choose whether to buy your props or treasures.

3) AUCTION:

This module will be the most important module in the initial stage, which is an interactive game module of token and art replacement.

This is also a very interesting game for the application of the ATS token. You can capture planets in the universe (we are developing the universe world), and try to open it by one or more people using ATS. If you are lucky to open it, you will find that there is an art hidden in the planet, and it may also be other valuable products, You can auction it on our [universal Apollo] platform to get more tokens, and you can also get him. In this way, you will pay your token. If multiple people own the artwork together, and you still want to get him, you need to buy the ownership from them. We will mail it to you after you finish the transaction and send its digital products to your wallet. Meteor showers, comets and planetary collisions will occur in the universe from time to time, which will produce many gifts, such as some tokens (BTC, ETH, etc.) and some artworks. These are available for free. We will add tokens to the mobile pool for players to exchange usdt, BTC, ETH, BNB, etc.

So how do you get these tokens? You can get tickets through the platform, join the mining game immediately, and get these tokens through your work (serving other players or looking for NFT). Of course, you can also get these tokens by creating the props needed for the game, auditing and applying them to the game. Or exchange directly from a decentralized exchange.

4) ICO:

This is an information module, which can obtain the token of current ICO

through big data, so as to improve user participation and activity.

5) TOKEN AIRDROP:

This is an information module, which can obtain the tokens currently being airdropped through big data, so as to improve user participation and activity.

6) UNSWAP:

【ATLANTIS ORIGIN】 will develop a decentralized cross chain exchange (unswap) for ecology, which will provide lower exchange fees and enable users to get the best experience

3 Profit forecast

- NPC profit: 20%-50% per week
- Bidding fee 15%
- Mining income 10%-1000%
- Art appreciation 50%
- Auction proceeds: 20%-50%
- Token value added income 30% per week

4 Development plan

Part one

2021.07 project start

Token issue

Official website online

Part two		2021.08	crowdfunding
Part three		2021.10	defi mining Online
Part four		2021.12	auction function launched
Part five		2022.05	launch of defi exchange(unswap)

5 On Community Governance

Universal Apollo is a completely decentralized platform governed by the community. Any player can become a participant in the community to improve the development of the platform. This will depend on the community members' consensus on universal Apollo, especially the user experience and benefits. Community members also have the right to control the game parameters, gas fees and role allocation.

6 Automatic market making

We will control the market price of market makers to treat every market maker and platform user fairly. We are extremely fair. Anyone can be a NPC in the platform to get the minimum income. At the same time, we also open the mobile pool so that anyone can inject their tokens into the mobile pool for market making.

7 Future plan

We will gradually improve the richness and Simulation of the game, and we will apply the game to AR / VR and other platforms, so that users can work for it and get high remuneration.

We will continue to develop products and apply NFT to various exhibitions and home decoration.

At the same time, universal Apollo will continue to expand its ecology, including games, sports and artificial intelligence. Let our early participants be founders.

UNIVERSE APOLLO
